**SUPPLEMENT TO  
REPORT NO.**

**THIS IS UNEVALUATED INFORMATION**

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT OF U. S. C. 32 AND 32.05 THEREOF. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW VIOLATION OF THIS PROHIBITION IS PENALIZED.

1. In June 1955, ore was hauled from 6 levels by the old hoisting tower. It was learned from convicts that the levels had an extension of about 1 1/2 km. In late June 1955, the new hoisting installation was scheduled to operate on only three levels. 25X1
2. All mine cars were at first driven from the hoisting installation to the RKS with the exception of those loaded with "Smolka" which were pulled to the OTK and those with "Ruda A and U" which were pulled to the RAS. It was learned that ore "Ruda A" was again classified at the RAS into grades A/I, A/II, and A/III. Ruda U was also classified at the RAS; its active parts, called "Ruda A", were sent to the OTK, and the non-active or less active material to the ore bunker. 25X1
3. The active material from the RAS was shipped in mine cars or boxes to the OTK and there this material and the Smolka ore were packed into boxes. A total of 300 boxes were loaded on one truck with 5 boxes in 10 rows across the truck, and 5 boxes each one upon the other. It was learned from the OTK that the truck arrived at least twice every day and in the second half of the month even three times. This procedure took place almost invariably from January to June 1955.
